

Name: _____

Class: 9

Teacher: Mr Lloyd

Issued date: w/b 21 July 2025

DUE DATE: Friday, 12 September 2025

Assessment Policy

1. The assessment is to be submitted on or before the due date.
2. If you attend TAFE/sporting commitments/traineeships on the day the assessment is due, the assessment must be handed in to the College on or before that day.
3. If you are ill on the day your assessment is due, you must submit your assessment on the day the assessment is due. This can be done electronically or submission of your work by another person (eg; family member) in person to the College.
4. If there are other extenuating circumstances, which cause your absence on the day an assessment is due (death, personal or family distress), you will need to speak to your teacher and the HOTL as soon as possible before or on the due date. The policy remains that assignments are submitted on or before the due date.
5. Ensure you submit your assessment in the approved manner – via Schoolbox, via email or hard copy. Ensure you keep a copy of your assessment throughout the drafting process and including the final submission.

Assessment Extension Request

Extensions are only granted in exceptional circumstances. If you require an extension for this assessment item you will need to speak firstly to your teacher and secondly, the relevant Head of Department (who will consult the Head of Teaching & Learning). Any application for extension must be completed at least (3) days prior to the due date.

An extension is approved for this assessment. The new due date is: _____.

Class Teacher

HOD / HOTL

Assessment Adjustments (for Teacher use only)

The following adjustments have been made for this student in relation to this assessment item:

- Additional discussion to understand the assessment/ scaffolding/ researching/ presenting
- Extra time/ Reduced word length
- Modified assessment item
- Modified marking criteria

Other:

Westside Christian College

Year 9 Digital Technologies

Assignment
Semester 2, 2025

2.1 Sustainability Portfolio Assignment

Student: _____

Teacher: Mr Lloyd

Due: Friday, 12 September 2025 (Week 9)

Results

Knowledge & Understanding	
Processes & Production Skills	

Context: Sustainability development goals

The Australian Curriculum places emphasis on Sustainability as a priority for study.

Through understanding Sustainability, students develop the knowledge, skills, values, and world views necessary to contribute to more sustainable patterns of living.

The Sustainability priority has been developed around the three key concepts of **systems**, **world views** and **futures**.

[<https://www.australiancurriculum.edu.au/f-10-curriculum/cross-curriculum-priorities/sustainability/>]

Task

In this assignment you will be ***building a website promoting a Sustainability goal issue that you have researched***. You need to incorporate at least two images, **that you create yourself**, in your website. You need to show evidence of the information you have researched, and the words you plan to use on your website, **in a document** that you submit. Part of your task is also to show the layout UX and UI you plan to use – on paper or using Canva. You also need to keep a bibliography in your documentation and a list of weblinks included in your website.

An example of the issue you wish to address:

Sustainability Development Goal - Goal 12: Ensure sustainable consumption and production patterns

Sustainability aim

“Reduce the use of plastics to save the planet”

If this is your focus then you are building ideas, resources, and a website about reducing plastics.

Your aim in this project should be to: provide information on a particular issue; and provide ways to affect positive change. That is, provide solutions what people can do to make positive changes. Consider whether the change should be undertaken by governments, industry or by individual people.

Task steps

1. Research what the United Nations Sustainability issues are and choose an issue that you wish to address in your website. Record your plans in a **document**. Keep a bibliography in that document. Start storing relevant resources – images, links, and videos – that you may need for your website. When complete, submit this to SchoolBox.
2. You need to create two images from scratch using software. Draw up some rough drafts on paper and then build the images. **One** of the images needs to be a vector object – that is, it has no downloaded image part to it – you have created it entirely from shapes, lines, and text. Naturally, these images need to promote your chosen sustainability goal focus. When complete, submit these plans to SchoolBox (drawings and actual images by themselves).
3. Next you need to plan how you want to display the gathered information in a website. Firstly, show basic layout options with a UX design of **all pages** of your website. Secondly, draw a UI design of **all pages** of your website showing layout, what content is going where, and styling plans. When complete, create a webpage called 'Design' and add ALL the design images with titles/information to explain what each image is. This page needs to form a part of your website but does not need a design page for it.
4. Build your website using HTML and CSS in Visual Studio Code. You may also use a CSS CDN library to assist you in the construction phase. When complete, compress (zip) the *whole website folder* and submit to SchoolBox.
5. Write an evaluation and add this as a separate html page to your website (no design of this page is needed either).

The evaluation is a **400 word (minimum) evaluation** of the process and product that you have created. Answer questions such as: Process – How was the process? Did everything go as planned?

For example: Product – Does the finished product look like what you planned? Does it look better? What did you change and why?

The emphasis here is on what you have changed from your original design ideas and what you may also do in the future if you were to do this again. You need to include **reflective** comments on the impact(s) this site may have to those who read this information.

Ideas for Documentation

The documentation is where your planning and decision-making is shown, along with an evaluation. It may be made up of the following parts:

1. Campaign title and caption – the issue and aim of your website
2. Details on what you specifically plan to promote
3. A bibliography of your research – only those websites from which you have specifically used images, ideas, and content

Note: Submit this document to SchoolBox.

Stimulus

Systems	World Views	Futures
Explores the interdependent and dynamic nature of systems that support all life on Earth and our collective wellbeing	Enables a diversity of world views on ecosystems, values, and social justice to be discussed and recognised when determining individual and community actions for sustainability	Aimed at building capacities for thinking and acting in ways that are necessary to create a more sustainable future. The concept seeks to promote reflective thinking processes in young people and empower them to design action that will lead to more a more equitable and sustainable future.
Organising Ideas		
The biosphere is a dynamic system providing conditions that sustain life on Earth.	World views that recognise the dependence of living things on healthy ecosystems, and value diversity and social justice, are essential for achieving sustainability.	The sustainability of ecological, social and economic systems is achieved through informed individual and community action that values local and global equity and fairness across generations into the future.
All life forms, including human life, are connected through ecosystems on which they depend for their wellbeing and survival.	World views are formed by experiences at personal, local, national and global levels, and are linked to individual and community actions for sustainability.	
Sustainable patterns of living rely on the interdependence of healthy social, economic, and ecological systems.		

United Nations 17 Goals for Sustainable Development

STANDARD ELABORATIONS

AC9TDI10K02 – represent documents online as content (text), structure (markup) and presentation (styling) and explain why such representations are important - Layouts, designs, application of styling, choices of designs and ideas to promote sustainability goal.

AC9TDI10K03 – investigate simple data compression techniques – using tools to create images for use on the website.

AC9TDI10P04 – define and decompose real world problems with design criteria – Resource displays the problem and provide information well to inform with informative design elements following suitable implied criteria (providing information on the goal and focus of this resource)

AC9TDI10P07 – design and prototype the user experience of a digital system – Designs on paper or canva developed images AND documentation

AC9TDI10P08 – generate, modify, communicate and critically evaluate alternative designs – Designs show evidence of progression from inigtial to further developed designs, with the completed website a further development.

AC9TDI10P10 – evaluate existing and student solutions against the design criteria, user stories, possible future impact and opportunities for enterprise – Evaluation of this resource against implied criteria

AC9TDI10P11 – select and use emerging digital tools and advanced features to create and communicate interactive content for a diverse audience – Promotion of sustainability goal communicates content for a diverse audience and is memorable.

AC9TDI10P12 – use simple project management tools to plan and manage individual and collaborative agile projects, accounting for risks and responsibilities – planning all the elements, image creation, design tools, code/markup creation all coordinated to create a meaningful and memorable website that promotes a UN Sustainability goal.

By the end of Year 10 students develop and modify innovative digital solutions, decompose real-world problems, and critically evaluate alternative solutions against stakeholder elicited user stories. Students acquire, interpret and model complex data with databases and represent documents as content, structure and presentation. They design and validate algorithms and implement them, including in an object-oriented programming language. Students explain how digital systems manage, control and secure access to data; and model cyber security threats and explore a vulnerability. They use advanced features of digital tools to create interactive content, and to plan, collaborate on, and manage agile projects. Students apply privacy principles to manage digital footprints.
