What are the United Nations Sustainability Goals?

They are 17 goals which the United Nations (UN) would like to achieve by 2030. These goals are designed to address inequality around the world such as education, world hunger, zero carbon emissions. [\(source\)](#)

For my website, I have chosen to research goal two, world hunger. I have chosen this topic because it is an issue that affects many around the world, including Australia. It is also an issue that every one can take steps to reduce.

Why is hunger still a problem?

According to the World Food Programme (WFP), there are 319 million people facing acute hunger, 1.9 million people are in the grips of catastrophic hunger.[\(source\)](#) some of the problem is cause by lack of funding, and conflict (*ibid*). For example, the war in Gaza has left more than half a million people trapped in famine [\(source\)](#). The UN has also faced a 40% drop funding in 2025 compared to last year [\(source\)](#)

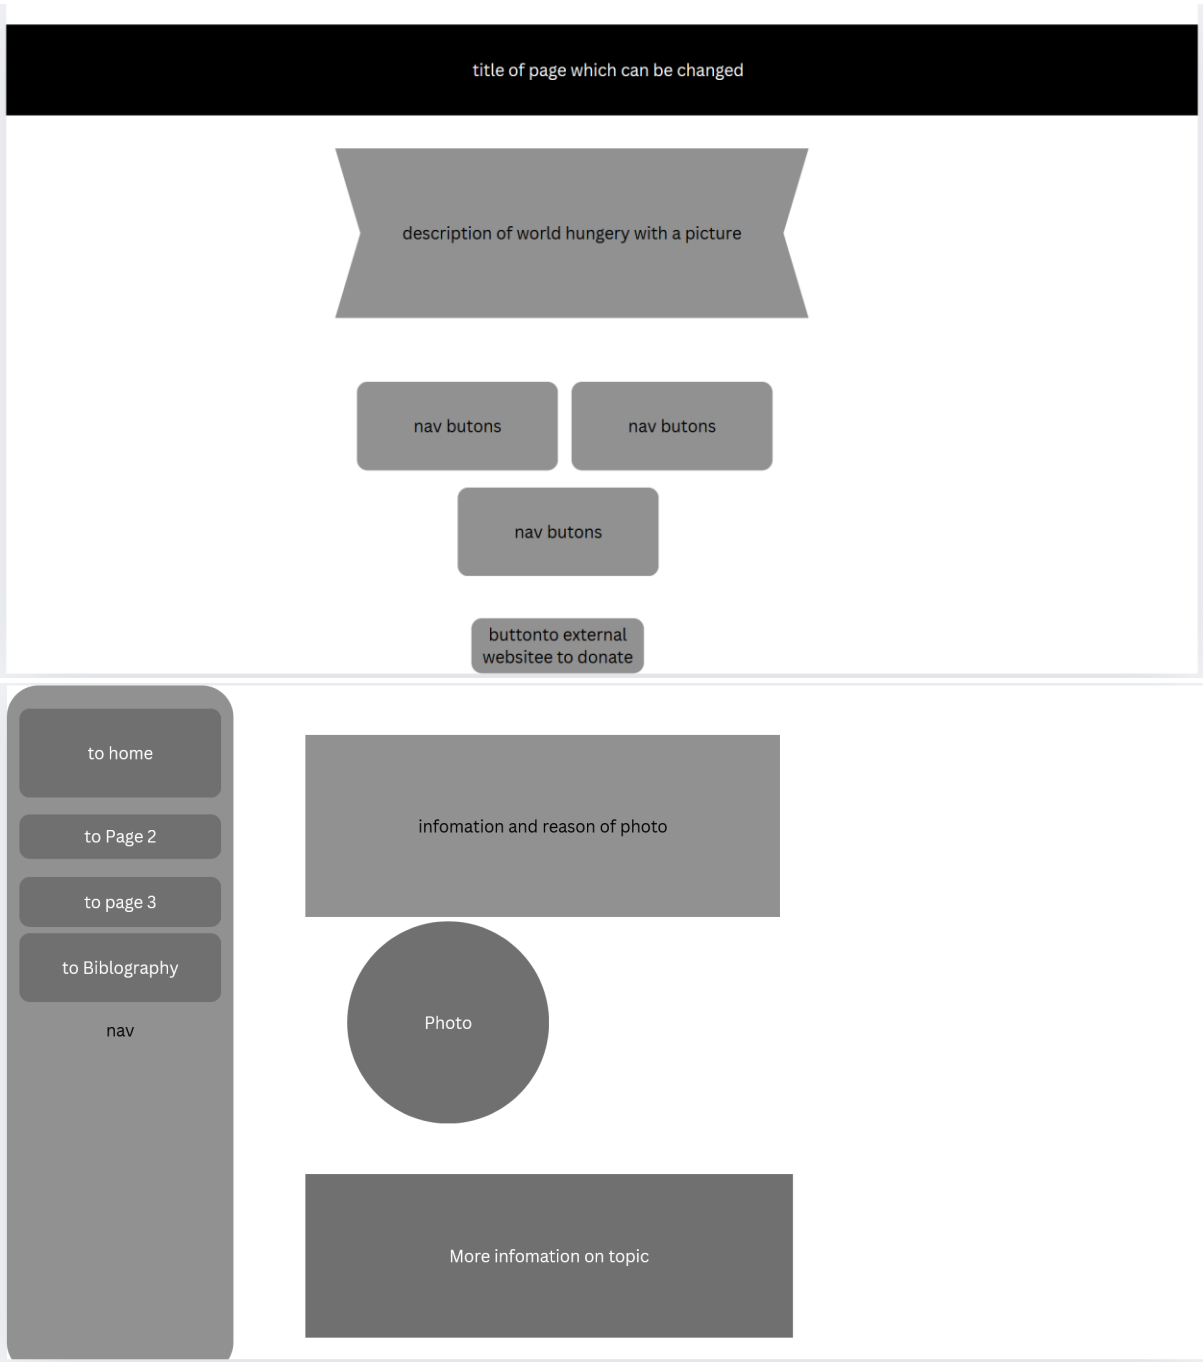

In Australia, “Close to **700,000** households experienced food insecurity in the last 12 months” [\(source\)](#). Food security is most common in regional parts of Australia, due to the lower incomes of these areas (*ibid*).

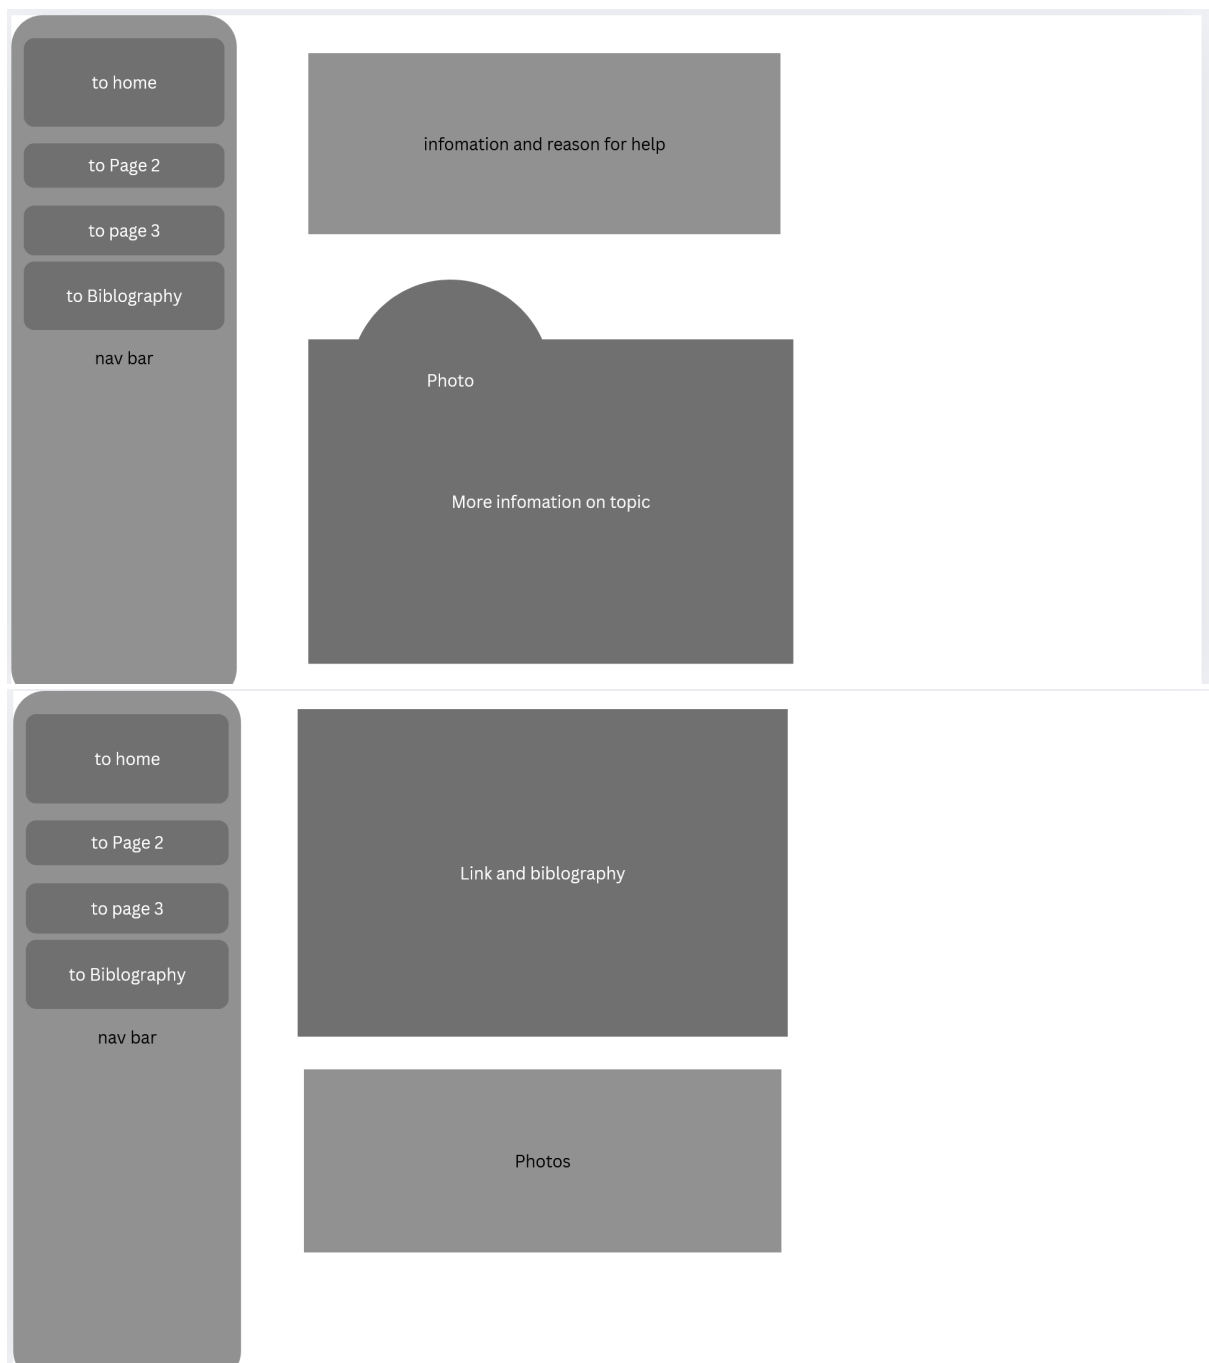

My goal for the website

My goal for this website is to show people what world hunger is, and how they can help make a difference. I am also aiming to make the website memorable, so people will have an increased awareness of world hunger. For my website I would like at least 4 pages, 1 home page 1 bibliography page, and 2 information pages. This would be optimal to communicate all the information whilst not overwhelming the user with unnecessary information. For my website, I would like to include pictures that enhance the website, reinforcing the themes and ideas.

Design Processes

My website designs Designs

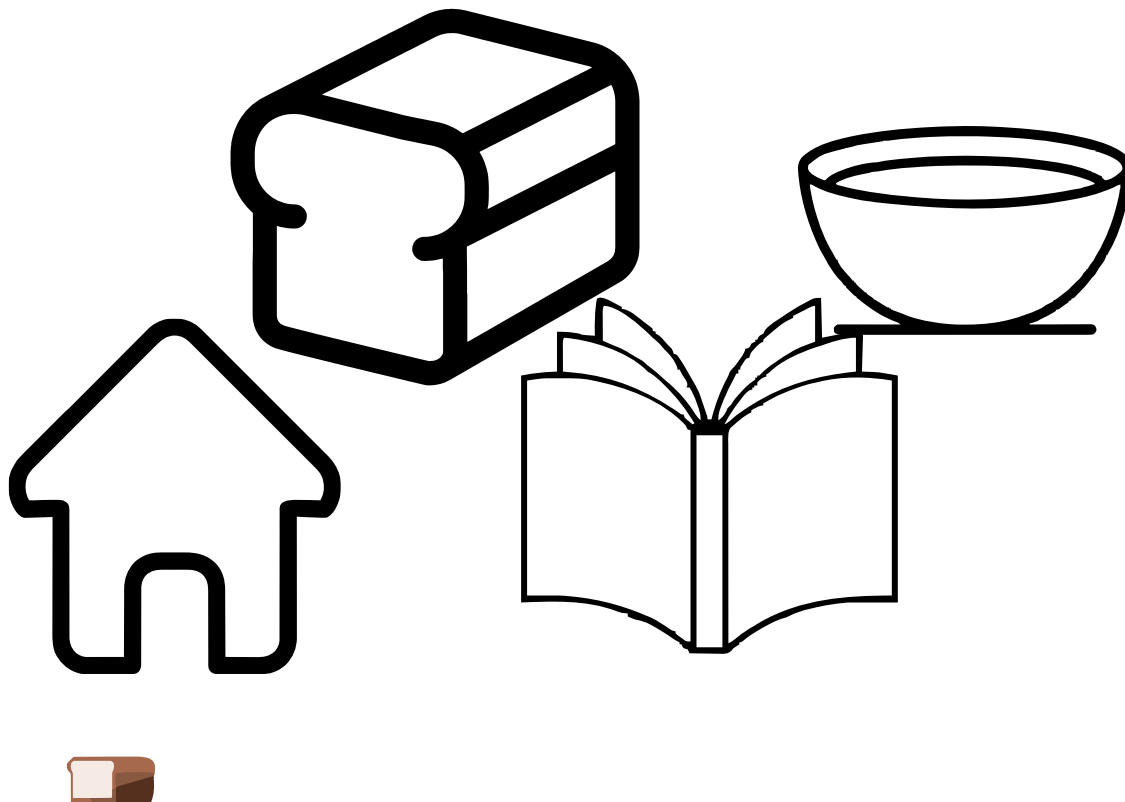

I have made these design so that the design is simple and easy to navigate. This will help to show people the information on the website.

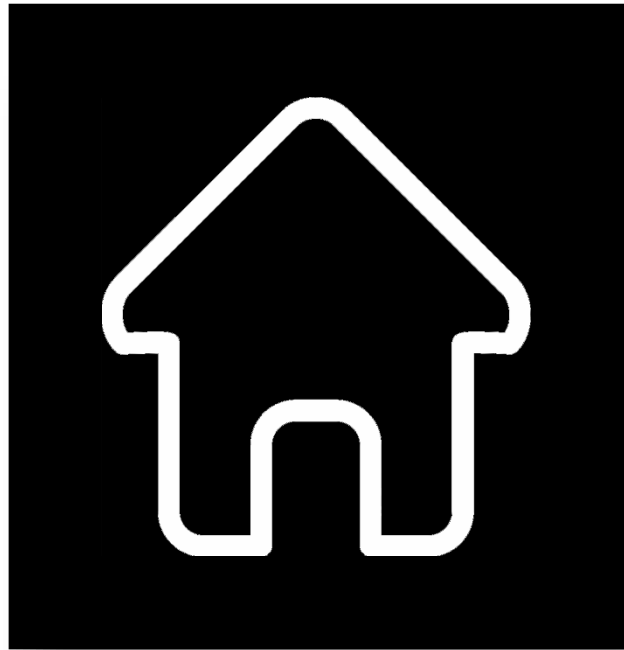

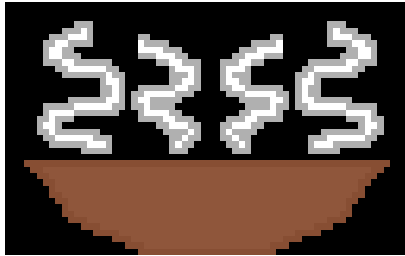

My Images

For my vector images, I designed a pixel art image and then I converted them in to vector images. Some of them where:

I chose to make these images of simple so they could be used as icons for each of the respective web pages. The originally white images were changed to black, so they can be viewed without eyestrain. The bread vector was used in a prototype, but was not incorporated into the final version.

Next is the png/jepg images. These ones are less common in the website but still used:

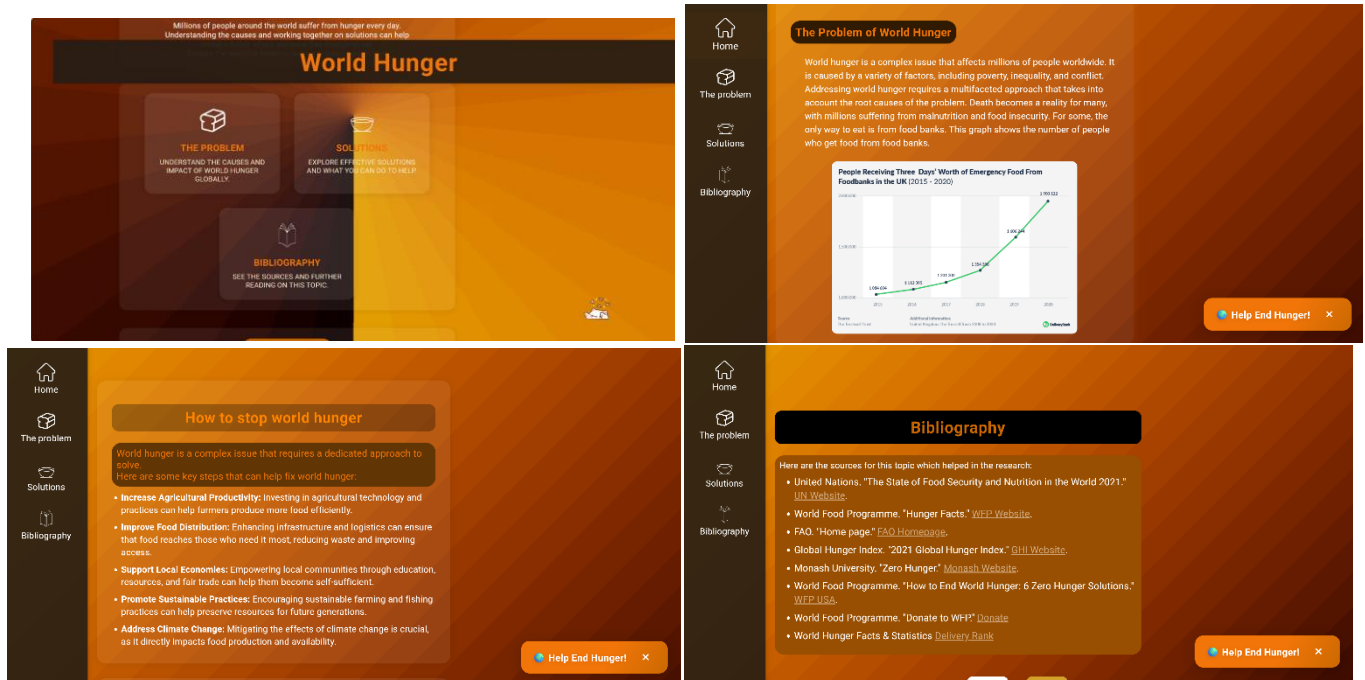

The bread and the soup bowl were both prototypes they inspired their vector image counterpart. The house picture normally has no background, but to make it viewable on this document, one has been added. The house is a pixel art image which got converted into a vector, but for the final website the png is the final image, not the vector.

Evaluation

For my website I tried to use shards of darker orange to make it look more like the colour of bread which is a food and because my website is talking about would hunger, I thought that it would be fitting.

Images:

No website is ever perfect, but evaluating strengths and weaknesses will help improve future iterations and projects.

Weakness:

The gradient may make it difficult to read the content on the pages, such as titles and paragraphs. This may make accessibility difficult for people with visual impairments. On the home page, the content is all left-centred, except for the title, which is in the middle of the page. This aesthetically detracts from the page. There also appears to be high levels of lag, due to less than optimal design of the webpages and how they interact with each other, which may frustrate users.

Strengths:

The interface contains a lot of information, which gets to the point, instead of distracting users. Similarly, the use of the golden gradient is unusual, and interests users and encourages them to stay. Another strength is the button which pops up on all webpages, asking you to donate. It is easily accessible to users and easy to understand its purpose.
